About Us

CY CARBIDE MFG. CO., LTD., Established in 2002, is a professional manufacturer and exporter of high performance tungsten carbide products, RTP powders and CERMET materials. CYC delivers globally a high performance standard and special products offering, that meet the most challenging demands from industry sectors including...metalworking, mining, construction, oil & gas, die & mold, and woodworking.

CYC has two production sites which located in Kunshan city , 50 km away from Shanghai, together with the Jiangxi raw material production, consist of production, laboratories and R&D facilities. 500+ skilled employees, including tooling and material grade design engineering on site.

CYC High performance products are guaranteed by a strong process management system, resulting in consistent quality for every batch and product. Strict control of our raw material supply chains and 100% traceability for every product batch throughout the entire manufacturing process. A philosophy of continuous improvements within every process is a core principle in our ways of working. CYC is a ISO 9001:2015(TUV) certified business.

CYC Adheres to responsible and sustainable business practices, including conflict free raw material sourcing, proactive health management for our employees, and continuous concern about the environmental impacts of our business. Our open and transparent business philosophy allows our customers, employees, and external suppliers, to have confidence in our business, ways of working, and our products.

Manufacturing Process

1. Powder Mixing

CYC grades are designed upon application. Our process start with powder mixing. Raw materials includes WC, Co and other elements.

2. Spray Drying

Wide variety of CYC designed grades from superfine to coarse grain size are available. Grades with different grain size are ball-milled, sieved, granulated in separated systems to avoid grain contamination.

3. Extrusion

Spray drying process makes the powder into superior homogeneous particle sizes with good flowability and as a result, the dimension variation on sintered blank is much smaller.

4. Sintering

The rods with or without axial holes, including helical types, are formed by extrusion pressing. Our automatic extrusion systems and technical know-how helps to achieve consistent geometries.

5. Preforming

Turning, milling, drilling, cutting can be applied on green blanks in order to preform the part to net shape according to customer's drawing, which can greatly enhance customer's productivity for special and complicated tools.

6. Vacuum Drying

This process removes the plasticizer in the rod blanks using a vacuum drying furnace.

7. Sintering

Green blanks are sintered at temperature around 1400 °C (cobalt melting) to become super hard and tough. CY utilizes HIP (hot isostatic pressure) sintering furnace which gives carbide maximum toughness to meet the most critical working applications.

8. Centerless Grinding

Most of the rod blanks need to be centerless ground, to achieve precision tolerances h6/h5. In addition, length cutting, chamfer, slot, cylindrical grinding service can be offered upon customer request.

9. Inspection

The key properties are monitored from raw material, RTP and raw sintered parts in our laboratory for quality and performance guarantee. Diameter, roundness, run-out, roughness, pitch, TK, concentricity, inspection will be done before the parts are shipped to the customer.

QUALITY

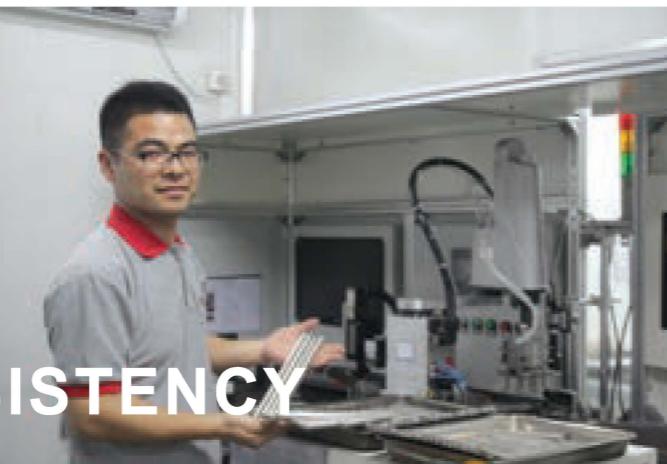

Carbide consistent quality has to be the top priority.

CONSISTENCY

Our manufacturing process is operating fully in compliance with **ISO9001:2015 (TUV)**.

Consistency and traceability is the promise we keep to our customers .

EXPERTISE

Near 20 years of experience doing R&D and manufacturing carbide, CYC has built a dedicated team consisting global experts in technical and commercial areas who always stand behind our customers.

Our Capabilities

The mission of meeting and exceeding customer's expectations is ongoing. CYC has a wide range of capabilities to provide more high value services.

1. Grade design for specific applications
2. Geometry design for specific jobs
3. Prototypes for any quantity
4. Issuing of 2D/3D drawings
5. Hard machining service includes
Centerless Grinding
Length Cutting
Chamfer Grinding
Internal Grinding
CNC Cylindrical Grinding
Plain Surface Grinding
Wire EDM/ Laser Marking

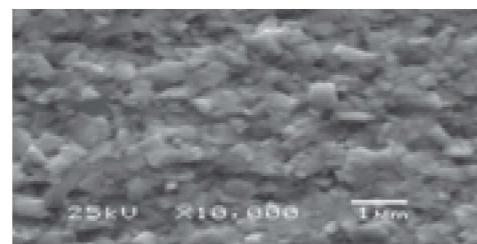

Grade Chart Of Carbide Rods

Grades	Binder %	Hardness		T.R.S N/mm ²	Density g/cm ³	Grain Size	ISO Code	Grades	Binder %	Hardness		T.R.S N/mm ²	Density g/cm ³	Grain Size	ISO Code	
		HRA	HV10							HRA	HV10					
	10.0	91.8	1600	3800	14.45	Submicron			6.5	93.1	1840	2800	14.85	Submicron		
MH10F	An excellent general purpose grade to cover most of the cutting applications for materials of ISO P, M, K, N. Suitable for drilling, milling and reaming.					K30		MH7	A harder grade for machining aluminum alloys, graphite, composite materials. Suitable for milling, reaming and diamond coating.					K10		
	8.0	93.2	1860	3300	14.6	Ultrafine			3.0	93.2	1860	1800	15.25	Fine		
UH8	Ultrafine grain size offers excellent sharpness for machining hardened materials up to 60 HRC, and extremely high performance machining of non-ferrous metals like Aluminum. Suitable for finish and semi-finish milling, gear hobbing.					K20		CH03D	Best choice for Diamond Coated Tools. Strongest adhesion and extended tool wear life. Suitable for high performance milling and Drilling of Composites, CFRP, Graphite.					K05		
	12.0	92.2	1660	4000	14.15	Ultrafine			9.0	94.0	2040	4000	14.45	Superfine		
UH12	Gives high impact strength while maintaining excellent wear resistance. A universal grade for cutting Stainless Steel, Titanium Alloys, Nickel base alloy and other difficult to machine materials. Suitable for milling, drilling.					K40		SH904	Made of superfine grain size 0.2 ~ 0.4 um, high wear resistance and impact strength for meeting the most critical cutting challenges in composite materials including CFRP, graphite and hardened steels > 60 HRC.					K30		
								UH10	Good wear resistance and toughness gives high performance for cutting stainless steel, heat resistant alloy, cast iron, suitable for high performance milling and drilling.					K30		

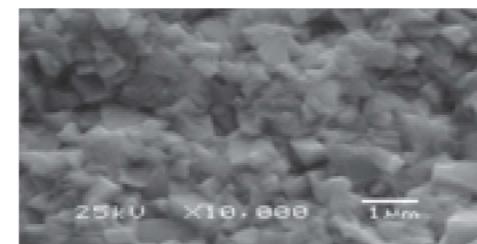

• Above data are typical parameters.

• Above data are typical parameters.

Microstructure SEM 10,000 X

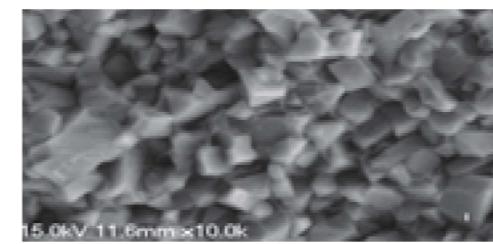

Superfine 0.2~0.4 micron

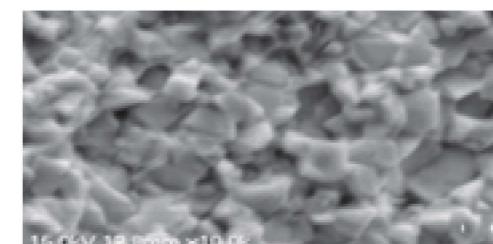

Ultrafine 0.4~0.6 micron

Microstructure SEM 10,000 X

Submicron 0.6~0.8 micron

Fine 1.0 micron

HMS : Heavy Alloy Modular Shanks

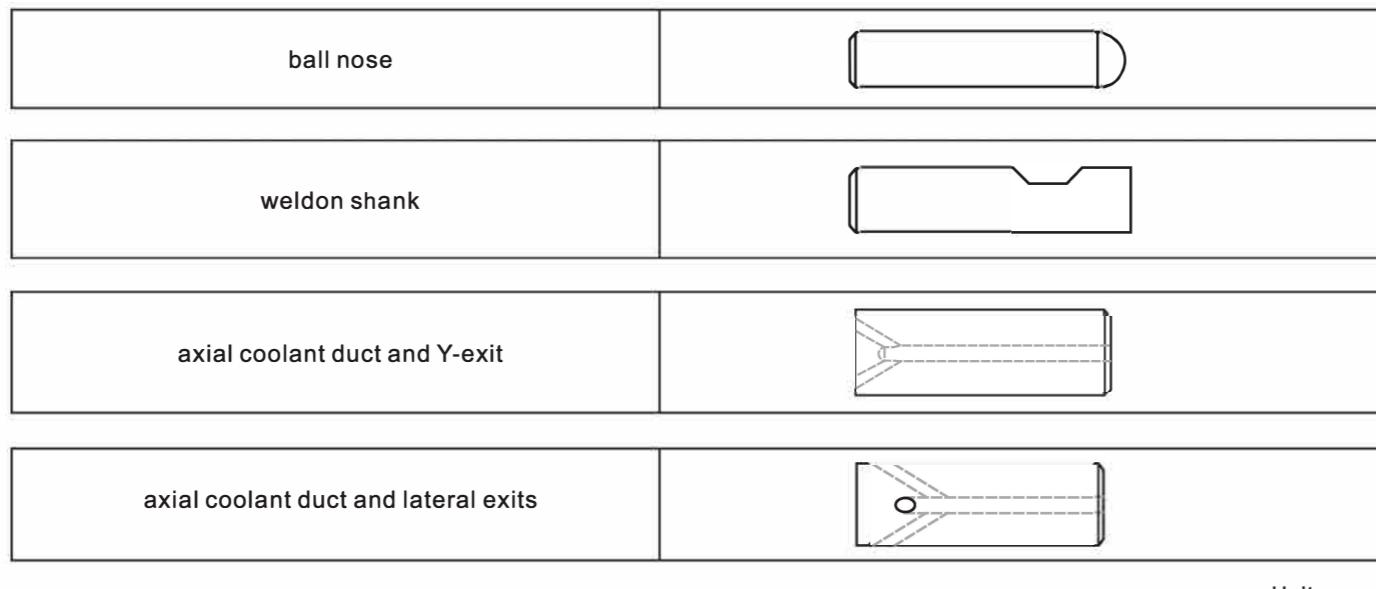

- **Features :** Screw-in, through coolant, Excellent toughness, more forgiving with reduced fracture rates. Anti-vibration.
- **Applications :** Ideal for Roughing and Semi-finishing applications, and for use in lower speed machining. Adopted to ISO modular heads.

CMS : Carbide Modular Shanks

- **Features :** Screw-in, through coolant, Excellent rigidity, and anti-vibration.
- **Applications :** Ideal for semi-finishing and finishing applications, and High Speed machining. Adopted to ISO modular heads.

Carbide Preforms

With our experience in carbide specials manufacturing, CYC has developed a Preforming Production line, with a streamlined process flow, that enables us to support and meet our customers critical demands for complicated, difficult to machine, special tool blanks, that require Expedited Delivery Service Globally. Please allow CYC to help you achieve cost savings by customizing your carbide.

Grade	Binder	Hardness		T.R.S	Density	Grain Size	ISO Code
	%	HRA	HV10	N/mm ²	g/cm ³		
MH10F	10.0	91.8	1600	3800	14.45	Submicron	K30
	An excellent general purpose grade to cover most cutting applications. For materials of ISO P, M, K, N. Suitable for drilling, milling and reaming.						
UH12	12.0	92.2	1660	4000	14.15	Ultrafine	K40
	Gives high impact strength while maintaining excellent wear resistance. A universal grade for cutting Stainless Steel, Titanium Alloys, Nickel base alloy and other difficult machine materials. Suitable for milling, drilling.						
EH12	12.0	90.7	1450	3500	14.2	Submicron	K40
	Suitable for tool shank and PCD tool body .						

Standard Tolerance For Preforms

Diameter Tolerance

OD(mm)	Basic allowance(mm)	Sintering Tol.(mm)
>Φ5—Φ14	0.8	±0.2
>Φ14.1—Φ25	1.0	±0.3
>Φ25.1—Φ48	1.2	±0.4
>Φ48.1	1.6	±0.5

Center and Exit hole tolerance

Hole dia (mm)	Tolerance (mm)
>Φ0.8—Φ1.5	±0.1
>Φ1.6—Φ3.0	±0.2
>Φ3.1—Φ8.0	±0.3

Length & Concentricity

Basic allowance(mm)	Sintering Tol. (mm)	Concentricity(mm)
+ (0.4+0.5%L)	±0.5%L	≤0.3

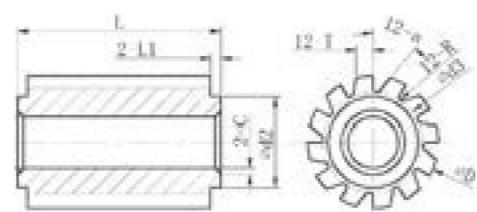

For example, if L=100mm, then it's basic allowance is +0.4+0.5%*100=0.9mm
Sintering tolerance is ±0.5%*100= 100.9±0.5mm.

Preform Blanks for Cutting Tools

Our Competence

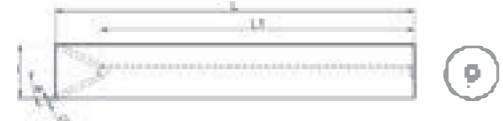

- ① MOQ starts at 1 piece
- ② As soon as 5 days
- ③ Fully customized according to your drawings
- ④ Provide OD precision grinding service

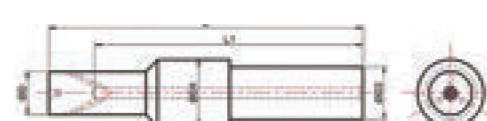

Gear hob blanks, raw sintered

T Type milling Blanks, raw sintered or h5/h6 ground

Milling cutter blanks,with 2/3/4 radial coolant holes
h5/h6 ground,

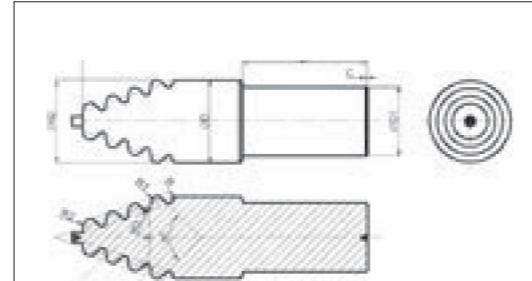

Step Drill Blanks
Unground or OD h6 ground

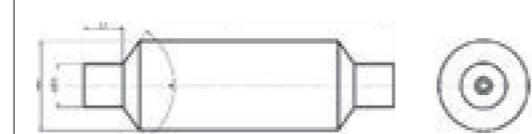

Preform Blanks for Cutting Tools

Our Competence

- ① MOQ starts at 1 piece
- ② As soon as 5 days
- ③ Fully customized according to your drawings
- ④ Provide OD precision grinding service

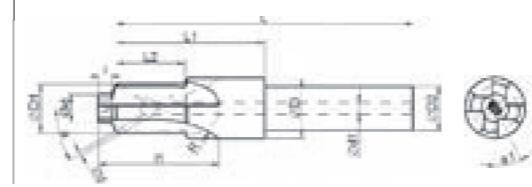

X'mas tree blanks.
Raw sintered or h6 shank ground

Center drill blanks, raw sintered or h6 ground

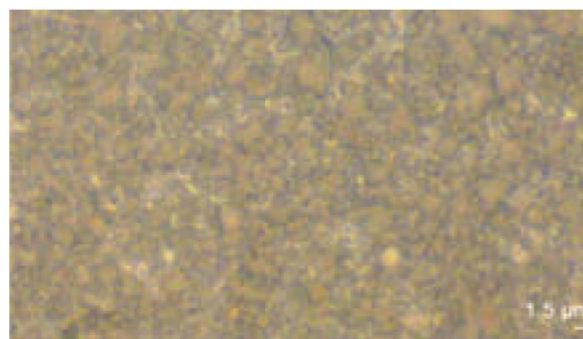

Boring bar shanks, raw sintered or h6 ground

PCD shanks,raw sintered or h6 ground

Specifications on cermet

- 1.R&D of cermet grades done in house by our experienced technical team.
Tic+TiCN as the major contents.
- 2.With features of excellent wear resistance, high red hardness,chemical durability and lower friction coefficient, makes the lifetime of Cermet 3-10 times that of normal carbide.

Cermet is a good choice for metalworking tools when the application requires high speed, high precision, high efficiency and a fine surface finish.

Inserts

Rods

Other Metal Cutting Tool Blanks

Due to our comprehensive and variable forming solutions, we are able to produce the various type of rods by extrusion pressing, and also the direct pressing of blanks such as rotary bur blanks, disc cutters etc.

Special developed grades upon application, high precision press tools designed built in house, offer tighter tolerance control, which ensures higher performance of products delivered to you.

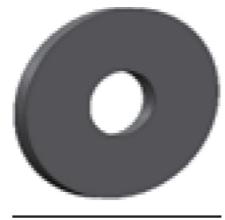

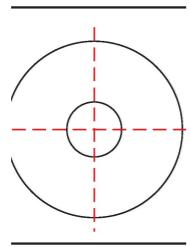

Grade Chart

Grade	Binder %	Hardness		T.R.S N/mm ²	Density g/cm ³	Grain Size	ISO Code
		HRA	HV10				
CK10H	6	91.3	1530	2500	14.9	Medium	K10
Ideal grade for rotary bur blanks.							
MH7	6.5	93.1	1840	2800	14.85	Submicron	K10-K20
Standard grade for carbide strips. For cutting non-ferrous metals like Cu, Al.							
MH10F	10	91.8	1600	3800	14.45	Submicron	K30
Standard grade for carbide strips, disc cutters , for machining most kinds of steel.							
UH12	12	92.2	1660	4000	14.15	Ultrafine	K40
Standard grade for carbide strips, disc cutters. For machining stainless steel.							

● Non-standard specifications and grades can be provided upon request.

Rotary Bur Head Blanks

- Inch styles - BSA, BSC, BSD, BSE, BSF, BSG, BSH, BSM and BSL
- Metric styles - ZYA, WRD, KUD, TRE, RBF SPG and KSJ

Features: Good wear resistance and longer tool life. Brazing fixture holes available.

Applications: DIN and INCH standards of tungsten carbide rotary bur blanks for fabrication of finished rotary burs.
